PROFESSIONAL SUMMARY

Results-driven Software Engineer with 3+ years of experience designing and building scalable backend microservices using Java, Spring Boot, Quarkus, and Kubernetes. Proven track record delivering enterprise telecom solutions, optimizing system performance, and implementing event-driven architectures with Kafka. Strong in GraphQL and REST API development, CI/CD, unit testing, DevOps practices, Agile delivery, and clean, maintainable design for high-traffic production environments. Skilled in system design, low-level design (LLD), and cross-functional collaboration with QA, DevOps, and Product teams.

Core Competencies: Backend Development, Microservices Architecture, API Design (REST & GraphQL), Event-Driven Architecture, System Design, Database Design, CI/CD Automation, Containerization, Cloud-Native Development, Agile/Scrum, Code Review, Unit Testing, Performance Optimization, Production Support

TECHNICAL SKILLS

Languages: Java, SQL

Frameworks: Spring, Spring Boot, Quarkus, Hibernate, JPA, jOOQ

APIs & Messaging: GraphQL, REST APIs, Kafka, Reactive Architecture, Groovy Script, DSL

DevOps & Cloud: Docker, Kubernetes, OpenLens, GitLab CI/CD, Jenkins, FlywayDB, Keycloak

Databases: PostgreSQL, SQL

Tools: GitHub, Postman, JUnit, Mockito, Swagger/OpenAPI

Concepts: Microservices, Distributed Systems, Data Structures & Algorithms, LLD & System Design, Design Patterns, Clean Architecture

PROFESSIONAL EXPERIENCE

Software Engineer

Sep 2022 – Present

Netcracker Technology, Bengaluru

- Designed and developed scalable backend microservices using Java, Spring Boot, GraphQL, and PostgreSQL, improving API response efficiency by [X]% across enterprise telecom modules serving [X]+ business users.
- Built GraphQL queries and mutations and implemented GraphQL-to-REST proxy layers, reducing cross-service integration effort by [X]% and streamlining communication between microservices and external REST APIs.
- Developed and maintained RESTful APIs for 5+ business modules with complete Swagger/OpenAPI documentation, enabling seamless integration across internal teams and [X]+ partner services and cutting integration onboarding time by [X]%.
- Implemented an Assigned Customers API aggregating customer data from multiple services with advanced filtering and sorting, reducing data retrieval time by [X]% and improving data accessibility for [X]+ business users.
- Contributed to the Customer Insights platform and built Tags & Alerts features for classifying and monitoring customer activity, enabling real-time operational insights.
- Played a key role in the Customer Sales & Representative Dashboard (CSRD) platform, developing backend services and designing CIP (Cloud Integration Platform) chains for structured customer-onboarding workflows.
- Implemented Kafka-based event-driven communication to support asynchronous data processing across distributed services, improving system throughput by [X]% and decoupling [X]+ downstream services.
- Deployed services within a microservices architecture using Docker, Kubernetes, and GitLab/Jenkins CI/CD pipelines, reducing deployment time by [X]% and release failures by [X]% through containerization and automated builds.
- Delivered critical backend features for Etisalat (Emirates Telecommunications) using Groovy Script and Quarkus, diagnosing and resolving [X]+ production issues per quarter in high-traffic telecom environments handling [X]+ transactions daily.
- Integrated Keycloak-based authentication and authorization for role-based access control, and improved observability through enhanced logging, error handling, and performance monitoring.
- Applied clean architecture principles, design patterns, and refactoring to modernize legacy modules; collaborated closely with QA, DevOps, and product teams to deliver reliable, production-ready solutions.

PROJECTS

Event-Driven Order Platform — *Java, Spring Boot, Kafka, Microservices*

- Developed an event-driven microservices order-processing platform using Kafka-based asynchronous messaging, REST APIs, and Spring Boot for scalable, loosely coupled workflows. Designed producer-consumer topic architecture to handle order lifecycle events with fault tolerance and horizontal scalability.

Subscription Billing Platform — *Java, Spring Boot, REST APIs*

- Built a subscription management and billing system supporting plans, invoicing, and recurring billing logic using Java, Spring Boot, and PostgreSQL, with modular backend services for scalable subscription-based business models. Implemented REST endpoints for plan upgrades, proration, and automated invoice generation.

API Orchestrator Platform — *Spring Boot, REST APIs*

- Developed a lightweight, Postman-like API client platform with a Spring Boot backend and REST APIs, simplifying complex service communication through centralized orchestration. Supported request chaining, environment variables, and response validation for streamlined API testing workflows.

Parking Lot Management System — *Java, OOP, LLD*

- Designed a parking-lot management system in Java applying object-oriented design, SOLID principles, and low-level design (LLD) patterns for vehicle entry, dynamic parking allocation, ticketing, and slot management. Implemented strategy and factory design patterns for extensible vehicle-type and pricing logic.

Document Organizer — *Java, Spring Boot, REST APIs*

- Built a backend system using Java, Spring Boot, and PostgreSQL to organize documents with structured metadata and storage logic, exposing REST APIs for document upload, retrieval, and categorization with tag-based search.

EDUCATION

B.E., Computer Science Engineering

Aug 2018 – Aug 2022

SJB Institute of Technology, Bengaluru • First Class with Distinction, CGPA: 8.5 / 10

AWARDS & RECOGNITION

- **Spotlight of the Month Award (2025)** — Netcracker Technology, for outstanding contribution and value delivery.
- **Certificate of Merit** — District-Level Art Competition, Haryana Govt.
